(a) Adverse drift
fit: 0.9 + 107×spread
R^2=0.95, n=40 arms
six-plan pool
six plans + three slack
exposure penalty (pp)
commitment spread of the pool, $(v_{\max} - v_{\min})/\bar{v}$
(b) Symmetric drift
fit: 0.3 + 36×spread
R^2=0.92, n=40 arms
exposure penalty (pp)
commitment spread of the pool, $(v_{\max} - v_{\min})/\bar{v}$
